

Fuel Treatment

Bardahl Fuel Treatment is a preventive fuel addition that can be used throughout the life of the engine. Its use is recommended to prevent loss of power due to engine clogging and wear.

Properties:

- Suitable for all petrol engines.
- Prevents contamination of the injection system
- Reduces the formation of carbon deposits and keeps the fuel system clean
- Reduces fuel consumption and black smoke emissions
- Removes water from the fuel and prevents pinging

Analytical data

Test	Results
Color	Yellow
Physical state at 20°C	Liquid
Relative density	0,835-0,85 g/ml
Flash point	52°C
Kinematic viscosity	< 20 mm ² /s

Manual

Suitable for all petrol engines. Pour the bottle into the tank and add up to 80 liters of fuel (ignore the reserve). Drive normally until the treated fuel is used up in one or more journeys.

Do not use fuel treatment with E85 biofuels

Suitable for all types of petrol engines (injection, carburetor, high pressure systems, turbos and LPG.) with or without catalyst. Caution: Do not spill or apply to lacquered surfaces.
