

Carburetor Cleaner

Bardahl Carburetor Cleaner has been developed to prevent and solve many problems that occur with carburetor engines. This petrol cleaner ensures that the nozzle, float etc are cleaned and also leaves a small oil film.

As a result, the float closes well and ensures that the nozzle can be opened sufficiently and does not linger due to gum formation of unleaded gasoline. Now the response to the accelerator pedal is better and smoother. Regular use of this petrol cleaner ensures that the carburetor remains clean and does not dry out.

Properties

- Cleans and removes precipitations from the carburetor
- Restores power, throttle response and acceleration
- Improves engine start-up
- Reduces black exhaust smoke
- Reduces fuel consumption
- Provides nice stationary run of the engine

Manual

1 can is enough for 60 liters of gasoline. If the engine does not run properly after the suggested dosage, it is advisable to add 1 can to 20 liters of petrol to increase the concentration.

If the carburetor cleaner is in the tank, empty the tank as much as possible.

Suitable for any petrol and catalyst. Does not affect plastic or rubber gaskets.

Not suitable for E85 bio gasoline.
