

## Hydraulic Valve Lifter

**Bardahl Hydraulic Valve Lifter** is a synthetic lubricant that can be used in all types of oil and all types of engines.

### The problem

---

Due to, among other things, the OEM requirements for an extended oil change, together with the use of hydraulic valves in modern engines, problems can arise due to precipitations of gum and varnish in the oil channels.

Problems can include:

- Increased fuel consumption
- Increased wear and tear.
- Excessive noise

### The solution

---

**Bardahl Hydraulic Valve Lifter** will ensure that the critical lubrication channels are free of gum and varnish, allowing the oil to flow freely. Use of this product:

- Eliminates and resolves faults throughout the engine
- Reduces engine noise, especially in the upper cylinder area.
- Forms a protective anti-wear film on valve thrusters, valves, and camshaft.
- Ensures that the oil filter does not become clogged.
- Increase the life of the engine.
- It promotes the oil flow through the engine.
- Suitable for use in both petrol and diesel lubricants.
- Suitable for all types of engines; diesel, common-rail, LPG, and petrol engines with or without turbo.

### Manual

---

Pour the contents of 300 ml into the crankcase during an oil change or when the oil needs to be refilled. Safe to use for catalyts and particulate filters.

**Article number** 1022B
